

How to update the status webpage to the latest version

This update will correct the Java certificate issue with Java Rev 45

Models: VM508E, VM500-8

Download and unzip StatusPageUpdate (vm508x).zip. A folder Status Page Update will be created. Open the folder.

Double click on **updatevm508.bat**. Enter the IP address of the device to be updated and then press the enter key.

The status pages will be automatically updated.

Exit the command prompt.

To test, open a browser and type in the IP address. You should see the following message from Java
